

HUMAN MACHINE INTERACTIONS

SMARTPHONE INTERACTIONS

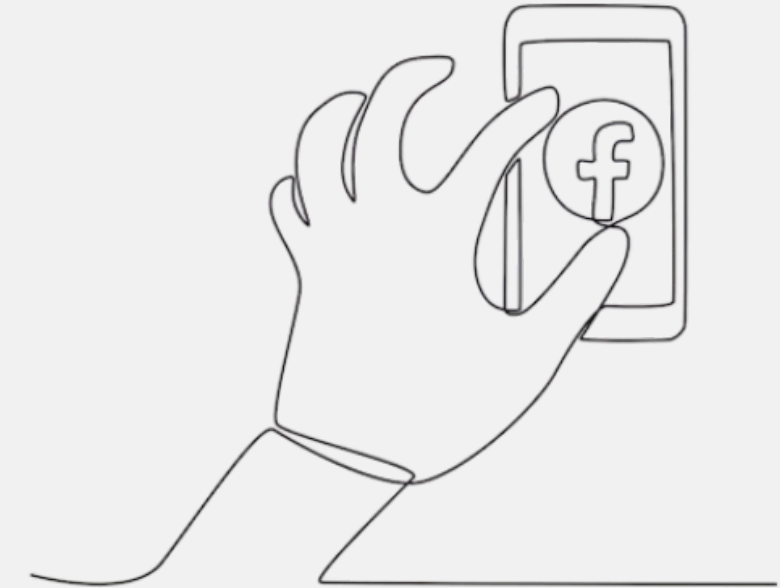

HUMAN INFLUENCE

Physical buttons, typing,
navigating apps...

MACHINE INFLUENCE

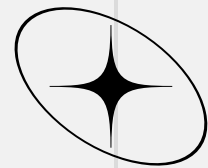

Notifications, alarms,
haptics, alerts...

CO-INFLUENCE

Algorithm based apps,
predictive typing...

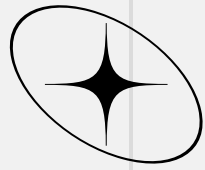

HUMAN INFLUENCE

Smartphones are tools we control. We tap, swipe, and talk to make them do our bidding. From choosing your favorite apps to adjusting settings, you're the boss. For example, you can quickly snap a photo, send a text, or navigate to a new location with just a few taps.

MACHINE INFLUENCE

Your phone is like a helpful assistant. It learns your habits and suggests things you might like. For instance, it might recommend music based on your mood or suggest a route to avoid traffic. It's always working behind the scenes to make your life easier.

CO INTERACTION

Smartphones represent a symbiotic relationship between human users and technological capabilities. This dynamic interplay fosters innovation and enhances user experiences across various domains.
